

A — C1 + C2: product consensus errs together

WorldCover = Dynamic World = Esri = built-up, expert = non-built. Agreement is not corroboration; and once WC calls “built”, the expert reads non-built ~7 times in 10.

B — C1: the coupled pair errs, WorldCover dissents and is right

Dynamic World = Esri = built-up (the pair that agrees most), expert = non-built, and WorldCover — least coupled to either — dissents and is correct here.

C — counter-examples

WorldCover = built-up, expert = built-up. WC is right on the boundary too; the gallery is not selected on WC being wrong.
